

# Easy Aerosol Delivery

## For Your Tracheostomy Patients

*With  
Anti-Static  
Chamber*

### **Setting the standard**

At Monaghan Medical we define the standard for special-need tracheostomy patients with the **AeroTrach Plus**<sup>®</sup> anti-static Valved Holding Chamber (aVHC). A simple and cost-effective system to quickly deliver medicine where it's needed most - straight to your patient's lungs.

### **Maximize Performance**

The **AeroTrach Plus**<sup>®</sup> aVHC anti-static polymer chamber minimizes static charge and improves aerosol availability. The see-through chamber allows caregivers to visualize the medication dose in the chamber.

### **Quick Relief**

The **AeroTrach Plus**<sup>®</sup> aVHC aerosol delivery is quick and easy – two important factors for any tracheostomy patient. Concentrations are delivered on inspiration only and are consistent – a benefit of the exceptional particle suspension time of the **AeroTrach Plus**<sup>®</sup> aVHC. As an additional benefit of the high particle concentrations, delivery is also cost-effective.

### **Expect Innovation**

Monaghan Medical is renowned for its extensive research and development of new technology for aerosol delivery. We are proud to continue the tradition of innovation with the **AeroTrach Plus**<sup>®</sup> aVHC, an improvement in asthma relief for tracheostomy patients.

# AeroTrach Plus® anti-static Valved Holding Chamber (aVHC)

## More efficient and comfortable medication delivery for your tracheostomy patients.

- **Comfort Right Fit™ Adapter**

Typical 15 mm adapters are designed to connect firmly in place. The **Comfort Right Fit™** adapter means the connection will fit tightly enough for an exceptional aerosol delivery, without excessive torque when connecting or disconnecting the device.

- **Anti-Static Polymer**

Our anti-static polymer chamber minimizes static charge which improves aerosol availability.

- **Inhalation Valve**

With a protective design for low resistance and superior responsiveness, even the smallest inspiratory effort will be rewarded. In addition, the valve also features increased durability.

- **Exhalation Valve**

With our improved, more robust design, your patients will experience a low resistance to exhaled flow. Additional protection from valve tampering or damage has been built in.

- **MDI Adapter**

We've selected a polymer material for the MDI adapter. With this reinforced material, we've increased product durability.

*Valve and baffle system maximizes the delivery of fine particles emitted from standard pressurized MDIs*

*Anti-static polymer material minimizes static charge which improves aerosol availability*

*Unique, clear, Comfort Right Fit™ adapter ensures visibility*

*Aerodynamic Chamber*

*Flow Dynamic Design:*  
Improves respirable dose of medication.  
Allows exhalation away from the patient.
